Custer
CREEPING RED FESCUE

CUSTER Creeping Red Fescue

Variety Name: Custer
Kind: Creeping Red Fescue
Genus: Festuca
Species: rubra
Experimental Designation: FR13

Creeping Red Fescue may come and go almost without notice like the rise and fall of a gentle tide. But once in a life time there comes along an exceptional specimen that will raise the bar forever. Custer Creeping Red Fescue is just that, a very drought tolerant plant, the darkest green creeping red Fescue on the market today and it was bred to withstand any climate abuse nature can dish out. Custer Creeping Red Fescue will not back down in extreme heat, shade, humidity disease or anything else the weather or climate has to offer as a challenge. Pick a creeper that will be the last one standing, pick Custer.
